ENISCOPE

Engineering Energy at UTC Swindon with Eniscope

Client

Challenge

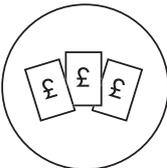

UTC Swindon is a Science, Technology, Engineering and Maths (STEM) College.

Their experience in closing the skills gap has been mirrored as they close the gap on energy waste. As a college specialising in Maths, they have calculated how to wisely save their energy resources both now and on into the future. Not only are they a top performing College as far as education is concerned – they are also now high flyers in the school of benefitting from energy saving and efficiency.

Targeting problems

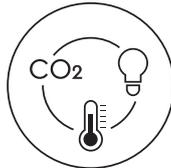

Core values at UTC Swindon include problem solving and teamwork, which both happen to be central to the process of ‘Monitoring & Targeting’. With Eniscope installed on site to provide real-time energy data, the College has begun the journey to significant energy savings.

- **Accurate** energy information
- **Cloud-based** data analysis
- Clear commitment to **sustainability**
